

Shell Telematics

Making data work harder for your business.

How it works

Shell Telematics uses the latest vehicle tracking technology along with Shell fuel card data to provide the visibility needed to make the most from drivers, vehicles, and operations. This data is then processed and delivered to you in the form of clear, actionable fleet intelligence.

Shell Card

The simpler, more secure way to buy fuel

On-board device

Our device reads and shares vehicle and driver data

Transaction, vehicle, and driver data communicates to the database

Data is processed and turned into actionable insights and triggers alerts

Fleet manager has easy access to key information via the dashboard and reports – e.g., fuel consumption variances

The key benefits of Shell Telematics

See more

Ensure driver security and compliance

- Dashboard provides instant at-a-glance view of your fleet's performance
- Map safe routes and detect crashes through real-time data*
- Receive vehicle health alerts to proactively intervene and increase vehicle availability

Do more

Increase your fleet's productivity

- Proactively investigate potential vehicle issues and reduce maintenance costs through visibility into vehicle performance
- Reduce risk and expenses through data tracking
- Improve driver engagement and incentivize improved driving skills

Get more

Access critical data to drive more value

- Save time with a single platform to manage fuel card data linked to your telematics devices
- Cut costs by monitoring fuel usage and performance
- Reduce CO2 emissions by tracking driver actions – idling, speeding, harsh braking, and inefficient route selection^

Drive more

Optimize your supply chain and operations

- Use actionable data to enhance your logistics, routing, and customer fulfillment
- Manage delivery and routing with tracking and notifications
- Build trust through your operational model

* Standard is near real-time data, with real-time data available in some options.

Features at-a-glance

Map

Track location and movement of all vehicles with satellite map view, Google Street View and live* traffic information.

Journey history

Review all journeys made with date, time, start and finish locations, drivetime and distance travelled.

Driver performance

Rate each drivers' driving behavior score based on the length and severity of the speeding, acceleration, idling time and braking events.

Vehicle performance

Get timely maintenance reminders and fuel-efficiency reports.

Geo-Plus

Set up geo-fencing to get alerts based on needs – e.g. alerts when vehicle leaves city limits.

Business/private mileage

Get reports detailing all journeys by driver to enable business/private mileage claims.

* Standard is near real-time data, with real-time data available in some options.
